earnix

Certified to SOC 2 Type II Standards

The Challenge of Staying Current and Competitive

Earnix maintains SOC 2 Type II compliance as part of our ongoing commitment to secure, reliable, and well-governed operations. This independent attestation confirms that our internal controls are not only well-structured but consistently enforced over time.

As a result, Earnix is uniquely positioned to support insurers, banks, and other regulated enterprises that require the highest standards of operational integrity and data protection.

SOC 2 Type II is a widely recognized benchmark for data protection, and we're proud to offer this added assurance to our customers and partners.

Built on Trust, Verified By Audit

SOC 2 Type II reflects more than a set of controls – it confirms a company-wide approach to protecting customer data and ensuring service reliability.

At Earnix, our processes are designed to meet high standards every day, not just during audits. This gives our customers independent validation of what we've always prioritized: operating with integrity, accountability, and a focus on long-term trust.

> At Earnix, SOC 2 compliance isn't a milestone—it's a reflection of how we operate every day. Our customers trust us to support highly regulated environments, and that starts with rigorous, independently validated controls. This framework helps us deliver both security and transparency at scale.

Benefits/Value

Greater Confidence in Vendor Security

Customers gain third-party validation that Earnix protects sensitive data and meets industry expectations.

A Stronger Foundation for Partnerships

This achievement supports deeper collaboration by aligning with enterprise procurement and compliance requirements.

Support for Long-Term Growth

Security and reliability are built into Earnix's platform, helping customers scale with peace of mind.

Confidence Through Transparency

SOC 2 provides a clear, consistent view into how Earnix operates securely and responsibly.

Fewer Compliance Barriers

SOC 2 can help accelerate reviews and reduce friction during vendor risk assessments

Features

Continuous Control Monitoring	Earnix enforces and controls continuously across day-to-day operations, ensuring that security, availability, and governance practices are embedded and not just documented. This operational discipline is essential to serving regulated environments.
Independent Third-Party Assessment	Our SOC 2 attestation provides independent confirmation that Earnix's systems, processes, and oversight meet rigorous industry standards.
Operational Resilience	Controls support business continuity, incident response, and risk mitigation across our core platform services.
Ongoing Compliance Investment	The SOC 2 Type II attestation report is one highlight in Earnix's larger effort to align with evolving standards and industry best practices.
