Elevate Data

Turn Scattered Data into Decision-Ready Intelligence

The Problem

Modern insurers and banks are swimming in data—but starving for insight. Data lives across Snowflake, Databricks, Amazon S3, and countless other sources. Moving it into pricing and underwriting tools is slow, manual, and risky. CSV exports, IT bottlenecks, broken governance, duplicate work, and endless cleanup turn what should take minutes into days. The result? Missed market shifts, slower decisions, frustrated teams, and data no one fully trusts.

In short: you have powerful data platforms but connecting them for market driven pricing and underwriting is the real mess.

The Solution

Elevate Data is the missing link between your data platforms and Earnix. It centralizes, automates, and governs data management—so pricing and underwriting teams can pull in more data, more often, with more confidence.

With seamless connectivity to Snowflake, Amazon S3, Databricks, and more, Elevate Data creates a single, trusted source of truth inside Earnix. Built on scalable infrastructure and enhanced with GenAI-powered profiling and transformations, it turns raw, fragmented data into model-ready datasets—fast, secure, and fully traceable.

No painfully manual CSV gymnastics, no guesswork and no waiting on IT.

Key Benefits

Faster, Better Decisions	High-quality, always-fresh data fuels more accurate pricing and underwriting models.
Radical Efficiency	Automated imports, reusable transformations, and a centralized repository eliminates duplicate work.
True Business Agility	Refresh data on-demand or on-schedule—weekly, daily, or whenever the market shifts.
Lower Risk, Stronger Governance	Full lineage, versioning, and access control keeps data secure, auditable, and compliant.
Less IT Dependency	Pricing and underwriting teams manage their own data—without breaking security rules.

Use Cases

Exploding Data Volumes
Import massive datasets in minutes instead of days—without file splitting or manual transfers.

Multiple Data Sources
Combine claims, policy, and third-party industry data into one unified view.

Frequent Data Refreshes
Keep pricing and underwriting models aligned with the most current data available.

Code-First Data Teams
Use the Elevate Data SDK directly from IDEs and notebooks for fully automated pipelines.

Audit & Compliance Readiness
Track every change, transformation, and handoff from source to decision.

Core Features

Seamless Connectivity
to Snowflake, S3, Databricks, and beyond

Scalable Spark Infrastructure
for high-volume, high-frequency data processing

Centralized Data Repository
with full visibility and reuse

GenAI-Powered Profiling & Transformations
for faster cleanup and prep

Robust Governance & Security
with lineage, versioning, and lifecycle access control

Flexible Interfaces
for data engineers, data scientists, IT, and compliance teams

Data shouldn't slow you down—it should drive your business forward.

Elevate Data gives insurers and banks the power to integrate, govern, and activate data without friction. Bring more data from more sources. Trust it, reuse it, and act on it—faster than the market changes.

Elevate your data.
Elevate your decisions.
