Earnix Price-It Connector for Sapiens IDITSuite

Build products and rates in Earnix and seamlessly integrate them into Sapiens core solutions

The Challenge

Legacy systems are holding insurers back

Legacy Policy Administration Systems (PAS) and rating engines are contributing to operational inefficiencies and rising loss ratios. Between predictive pricing models never getting operationalized into PAS, errors caused by manually recoding rates, challenges deploying rates across multiple PAS and distribution channels, and the time and costs to build and maintain integrations between systems, insurers are struggling to meet evolving market opportunities – until now.

Value Delivered

Intelligent Pricing & Rating

Integrate the Earnix rating engine and pricing into Sapiens IDITSuite and bridge the gap between advanced pricing analytics, rating and policy issuance. This pre-built integration provides insurers in EMEA and APAC a bi-directional flow of data across both platforms that enables real-time premium calculations, quote generation, and policy issuance across new business, endorsements and renewals.

Use Cases

Product/Market Expansion

Launch a new insurance product, line of business, and expand into new regions in weeks.

Innovate Your Rate Making Strategies

Leverage low-code tools to rapidly make rate changes and respond to evolving market changes before the competition.

Modernize Your Technology Stack

Use Earnix as a single platform for all pricing and rating. Realize immediate ROI on your key lines of business, then migrate more as you transform your Sapiens core systems.

Benefits

Accelerate Implementation Timeframes

Reduce the time it would take to implement a custom rating engine to PAS integration.

Enhance Pricing Sophistication

Leverage predictive AI and GenAI to build models that better align price with risk and drive more profitable growth.

Reduce Errors

Eliminate error-prone approaches of manually recoding rates in both systems.

A Powerful Partnership

With Earnix, tap into a leading intelligent decisioning platform that facilitates predictive modeling and what-if scenario analysis with a highly available, scalable rating engine and GenAI Copilot guidance. With Sapiens, unleash full lifecycle policy processing, unified claims and billing and rating engine flexibility.

Once integrated, insurers can enhance pricing, rating and policy management outcomes by leveraging the synergies of two leading insurance platforms, maximizing efficiency and driving superior business results.
